## **Phylum: Chordata**

Estimated genome size:

782 Million DNA base pairs (0,782 Giga bases)

Organism size:

65 cm TL

## **Distribution:**

Endemic to southern Africa and is currently known from the southern Mozambique to Struisbaai, Western Cape.

## **Importance:**

An important species to the recreational and small scale fishing sector. Listed as Near Threatened on the IUCN Redlist.

## **P2Solo Sequencing Report:**

Output: 74,7 Gigabases

Approximate N50: 12,8 kilobases

## **Draft Genome Assembly Statistics:**

Genome length: 744.94 Mb

BUSCO completeness score (single and duplicated genes): 99.6%
